

InputLog Application – Installation Guide

[1. Prerequisites](#)

[2. Setup](#)

[A. Disable Assembly Signing](#)

[B. Disable ClickOnce Signing](#)

[3. Clean and Build the Solution](#)

[4. Run the Application](#)

1. Prerequisites

- **Operating System:** Windows 12
- **Visual Studio** (not Visual Studio Code)
Ensure that .NET desktop development and C# workloads are selected during installation.
- **.NET SDK:** Download and install the [.NET SDK](#) v9.0.0 *
- Clone the repository for InputLog

** or the latest stable version compatible with the project. Please indicate which if so :*

2. Setup

Open the solution file (`.sln`) in **Visual Studio**. For each of the following submodules within the solution: `EmbeddedWord`, `GUI`, `InputLogCore`, `Server`

A. Disable Assembly Signing

1. Right-click the project in the **Solution Explorer > Properties**.
2. Go to **Signing**.
3. **Uncheck** the box labeled **"Sign the assembly"**.

B. Disable ClickOnce Signing

1. Navigate to the **Publish** tab (may also be under **Security** depending on Visual Studio version).
2. **Uncheck** the option: **"Sign the ClickOnce manifests"**.

 This avoids build errors related to missing `.pfx` files or invalid signatures.

3. Clean and Build the Solution

Go to **Build > Clean Solution**. Then select **Build > Build Solution**.

You may receive warnings (around 140+)—these do **not block execution** but should be reviewed for code quality and maintainability.

4. Run the Application

In **Solution Explorer**, right-click the `GUI` project, then click **Set as Startup Project**.

Error Log – Report Template

When encountering an error, please document it using the following template and append it to this document:

Error Report

- **Date:** YYYY-MM-DD
- **Environment:**
 - OS: Windows 12
 - Visual Studio Version: e.g. 2022 (v17.x)
 - .NET SDK: 9.0.0

Error Description:

Paste the exact error message here

Root Cause (if known):

Describe what led to this error

Solution/Workaround:

Describe how you resolved the issue

Reference (if applicable):

Paste any links to documentation, forum discussions, or Stack Overflow posts here
